`pylint calculator.py`

checks for issues

· for

```
prompt("What operation would you like to perform?\n1) Add 2)Subtract
                                    3)Multiply 4) Divide ↗
```

is too long

instead

> triple quote to allow for multilines

```
prompt(""" What operation would you like to perform
1) Add 2) Subtract 3) Multiply 4) Divide """)
```

• Good programming practice to run Pylint for all code to help you better your Python style adherence and for debugging.
